

Building Trades & Construction

Construction Technology I

This introductory course equips high school students with foundational knowledge and practical skills to explore careers in the building and construction trades. The General goal of the Construction Technology course is to provide students with entry level skills in the occupational areas of carpentry, electrical, plumbing and the construction trades. Emphasis will be placed on the production methods, execution and craftsmanship of work and the use of materials given.

Course Length:
1 Year/2 Periods
High School Credits: 20
